

PROFESSIONAL SUMMARY

Highly analytical 5th year Computer Engineering student with experience in architecting robust digital systems. Junior engineer in full stack development, Agile methodologies, specialized in WhatsApp API integrations, secure payment bridges Quality Assurance and enterprise grade DNS resilience. Proven track record of managing technical lifecycles and bridging complex engineering logic with mission critical business objectives.

PROFESSIONAL EXPERIENCE

Software Engineering Intern(QA & Systems Analyst) | Afrosoft

Sep 2024 – Aug 2025

- Architected enterprise-grade CI/CD pipelines in Jenkins and authored custom Docker configurations for containerized deployment of Java microservices, including the NRZ Biometrics System, improving deployment efficiency by 45%.
- Audited enterprise Java source code alongside senior developers; directly identified and resolved a critical financial logic bug where brokerage fees were being double-calculated on live schemas.
- Functioned as the sole QA Engineer for the ZDF Loans and Finance Manager system, executing rigorous integration testing to guarantee a flawless, on-time production deployment.
- Executed comprehensive functional testing for the TIC project and coordinated User Acceptance Testing (UAT) for the Zambezi Core System to validate business logic workflows against client specifications.
- Facilitated daily cross functional Scrum sessions for both the TIC and ZDF project teams to maintain sprint alignment, unblock development bottlenecks, and track milestone velocities.
- Spearheaded client facing progression sessions with the TIC stakeholders to gather feedback, translate requirements into testable specifications, and systematically prepare for production readiness.
- Collaborated with senior architects to ensure 100% compliance with corporate financial security and software delivery standards.

SELECTED TECHNICAL PROJECTS

Latterpay | November 2024 - February 2025

Engineered a Whatsapp Chatbot in Python 3 utilizing the Meta Developers API and sophisticated session handling for high accuracy online payemnts via the PayNow API and a highly user friendly registration system.This systemis on my github page for further analysis of the codebase.

ZET-5 | 2026

Developed a real time predictive energymonitoring and load prioritization prototype system designed to optimize ZESA prepaid electricity token distribution.Engineered a custom programmatic engie to ingest and parse real time telemetry data streams , implementing scheduling and predictive prioritization algorithms to optimizeload efficiency under high constraint environments.This system is readily available for a demo upon request.

LANGUAGES & FRAMEWORKS

- Python (Flask/Django)
- JavaScript (React/Next.js)
- TypeScript
- PHP
- SQL (PostgreSQL/MySQL)
- Tailwind CSS
- Supabase

CERTIFICATIONS

- DevOps: Beginner to Advanced (Udemy)
- Introduction to Java (Oracle / LinkedIn)

EDUCATION

BEng (Hons) Computer Engineering

Chinhoyi University of Technology | Graduating August 2026

A Level | Thornhill High, Gweru

3 A-Level Passes: Computer Science, Mathematics, Physics

O Level | Regina Mundi High, Gweru

12 O-Level Passes incl. Computer Science, Mathematics, English

CORE TOOLS

- Docker
- Terraform
- Git/GitHub
- Cloudflare
- Linux/UNIX Admin
- Jenkins
- MongoDB
- Java
